

Solution Requirements

Date	13 July 2026
Project Name	Cosmetic Insights : Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely access the web application and Tableau dashboard using login credentials (if login is enabled).	High
2	Authorization levels	Admin can manage dashboards and datasets, while users can only view dashboards and reports.	High

3	External interfaces	The system integrates with Tableau Public, Flask web application, GitHub, and the cosmetic CSV dataset.	High
4	Transactions processing	The system processes user filter selections, retrieves cosmetic data, and updates dashboard visualizations dynamically.	Medium
5	Reporting	Generate interactive dashboards, KPI cards, Tableau stories, and downloadable reports for cosmetic analysis.	High
6	Business rules, etc.	Products are categorized by brand, category, price, rating, and skin type. Filters and calculated fields are applied to display relevant insights.	High
7	Compliance to laws or regulations	The system displays publicly available cosmetic product information and follows general data privacy and copyright guidelines.	Medium
8	Other	Users can search, filter, and compare cosmetic products through an interactive dashboard.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Dashboard should load quickly and filters should respond efficiently.	Dashboard loads in less than 3 seconds
2	Scalability	The application should support additional cosmetic products and datasets without affecting performance.	Supports 10,000+ product records
3	Security & Data Privacy	Protect application data and use secure deployment practices.	HTTPS enabled and secure access
4	Reliability & Availability	Dashboard and website should remain accessible with minimal downtime.	99% uptime
5	Usability & Accessibility	Dashboard should be easy to navigate with clear charts, filters, and responsive design.	User-friendly and mobile responsive

6	Other	The application should be easy to update, maintain, and deploy on different platforms.	Supports easy maintenance and deployment
