

Technology Stack

Date	13 July 2026
Project Name	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details:

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	HTML, CSS, JavaScript, Bootstrap	Used to create a responsive and user-friendly interface for displaying the Tableau dashboard and project information.

2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	Python (Flask)	Chosen because Flask is lightweight, easy to integrate with Tableau dashboards, and suitable for developing simple web applications.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	CSV Dataset	The cosmetic dataset is stored in CSV format, making it easy to import, analyze, and visualize in Tableau without requiring a database server.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	Tableau Public & Vercel	Tableau Public is used to publish dashboards online, while Vercel hosts the web application for easy public access.

5	Version Control & CI/CD	GitHub	Used for version control, project collaboration, code backup, and source code management.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	Tableau Desktop, Tableau Public, GitHub	Tableau Desktop is used to create dashboards, Tableau Public publishes interactive visualizations, and GitHub manages the project source code.
