

Performance Testing

Date	13 July 2026
Project Name	Cosmetic Insights : Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman, Browser Developer Tools
Type of Testing	Load Testing, Performance Testing
Target Module / API	Flask Web Application, Tableau Dashboard Loading
Test Environment	Hosted Server (Vercel)
Test Date	13-07-2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Open the home page	10	60	Homepage loads successfully
2	Load Tableau Dashboard	10	60	Dashboard loads without errors
3	Apply dashboard filters	15	90	Filters respond quickly

4	Navigate between dashboard and story	10	60	Smooth navigation without failures
---	--------------------------------------	----	----	------------------------------------

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.4 sec	Pass	Fast response
2	Response Time (Max)	< 5 seconds	3.1 sec	Pass	Within acceptable limit
3	Throughput (Req/sec)	> 15 req/sec	18 req/sec	Pass	Good throughput
4	Error Rate	< 1%	0%	Pass	No errors observed
5	CPU Utilization	< 80%	52%	Pass	Stable resource usage
6	Memory Utilization	< 80%	60%	Pass	Memory usage within limits

Step 4: Observations & Analysis

Key Findings

- The Flask application and Tableau dashboards loaded successfully.
- Interactive visualizations and filters responded quickly.
- The CSV dataset was processed efficiently with smooth dashboard rendering.

Bottlenecks Identified

- No major bottlenecks were observed during testing.
- Slight delay was noticed during the initial Tableau dashboard loading due to dataset rendering.

Optimization Steps Taken

- Optimized the CSV dataset by removing unnecessary records.
- Reduced the number of calculated fields to improve dashboard performance.
- Improved Tableau dashboard layout and filter efficiency.
- Optimized Flask routing for faster page loading.
- Deployed the application on Vercel for better accessibility and performance.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below
